DOB 19.12.1980

Objective

I am a certified freelance Software Tester with aim to gain in-depth knowledge in the ever growing field of Information Technology.

Experience

Tester work, London, UK

June 2016 - June 2018

**Freelance Software Tester
(work from home)**

I worked from home through the biggest freelancing website www.upwork.com. My employer on upwork.com was "Tester work". Tester work is a London based crowd sourced software testing company providing work from home opportunities to software testers. The company provides testing services to organizations like Microsoft, Deezer, Facebook, Google and many more. Through this online platform, I tested applications on desktop and android platform and reported bugs through the inbuilt bug tracking tool. The projects are offered in repetitive test cycles and require mainly functional, regression, UAT, end-to-end and exploratory testing. The tasks involved are studying the requirements/specifications, preparation of test case document and detailed bug reports with useful screenshots, screen recordings, crash logs, and giving feedback/suggestions on various functionalities of the application.

Tested the following applications which involved multiple test cycles:

- Android safety app used for safety, security risk reporting and emergency communication. The app uses artificial intelligence, intelligent routing and Geofence broadcast messaging technologies.
- App that is used for automatic mileage tracking. It tracks the number of hours driven in a car and helps the user by categorizing the drives as work-related and personal. The app also provides a personalized web dashboard for the users to view the details of all the drives thus helping them, for example, employees (users) with deductions and reimbursements.
- website that integrates customers who are looking for home improvements and traders who will be providing home improvement services
- website providing virtual tour (uses virtual reality concept to provide highly immersive web experience) and interactive content for higher education
- Peer to peer lending website
- Recruitment website
- Tourism and travel website
- Real estate website that helps users to find real estate agents, buy and sell houses and also home loan offers
- App used to buy, sell and discover new products through video feed
- Web application used by students to learn and practice mathematics problems. The application also has an interactive scribbling pad.
- online mobile package deals website
- Desktop application that provides military-grade encryption of text, picture, audio and video messages
- Music app which provides an online music streaming platform. User can explore, download songs and create playlists

Mater Children's Hospital, Brisbane, Australia Administrator

August 2005 - August 2006

Worked as an administrator (database maintenance) at the children's hospital. I was involved in a project named "Growth Analyzer" which was aimed to monitor the growth parameters in children. Also the aim of the project was to tackle obesity and other growth-related disorders in children. My duties included:

- Measuring growth parameters of the patients
- Recording the parameters in the Access Database
- Generating reports
- Preparing graphs and charts for the team of doctors to analyze the patients' parameters
- Storing and updating all the patients data in the system

Education

**Vijayanagar Engineering College, Bellary, India. Affiliated to
Visweswaraiah Technological University (<https://vtu.ac.in/en/>),
Belgaum, India**

Bachelor of Engineering in Instrumentation Technology from 1998 to 2002.

Training

October 2007 to April 2008

Underwent training in manual and automation testing from **Srihitha Technologies, Hyderabad, India**. The training involved learning the manual software testing methodologies, automation testing tool (Quick Test Professional and Quality Center) and also project work. Project work was testing an application called E-banking.

Project: E-banking

E-banking is a web-based application. It allows different users such as admin, bank employee, customers to login and access the application. It also provides information about various services offered by the bank. The admin is the super user, who has all the privileges for creating the branches, users and bankers.

The objective of the banker module is to register and manage the customers of the bank and to book the day-to-day transactions in the bank. The customer module is designed for the bank customers to perform various activities such as accessing account summary, statements, funds transfer, online bill payments and loans.

Scope of project training was as below:

- Studied the business requirements, test plans and test strategies.
- Involved in designing manual test cases, test data and test execution.
- Conducted functional testing, exploratory testing and end to end testing.
- Maintained requirements, test data, test execution and defect tracking and reporting through HP QualityCenter.

Certification

November 2008

ISTQB Certification

Passed examination to get certified as ISTQB foundation level software tester.

July 2011

Test Analyst Certification

Underwent training for Test Analyst certification and passed exam at Tescom Intl Pte Ltd, Singapore (www.tescom-intl.com)

Tescom is a global software quality assurance company providing software testing services. They also offer certified training programs to QA professionals. The training involved the following aspects:

- Studied the detailed business processes, use cases and traceability models and how they are inter-related.
- Gained an insight into industry-standard use case document, test suite, test plan, test rules and description document, test script, test report documents and client acceptance tests.
- Studied various guidelines to prepare the above mentioned documentations.
- Understood the contents of use cases and transposition of use cases to test cases.
- Also gained knowledge about communication skills and processes in an industry environment.
- Passed 3 levels of examination to succeed towards obtaining certification of Test Analyst

Skills

- MS Office 2013

Programming: C, C++, Java, VB scripting, SQL

Software testing: QTP, QC, manual testing

Language

English: Fluent, proficient in both writing and speaking

German: Intermediate, Passed DTZ B1 exam and Integration course in Sept 2021. Presently attending the Berufssprachkurs B2.

Interests

- Reading novels and listening to music
-
